

HARSH RASAL

AI & MACHINE LEARNING DIPLOMA STUDENT | FULL-STACK DEVELOPER

📍 Kalyan, Mumbai, Maharashtra ✉️ harshrasal17@gmail.com | 438jhondhale@gmail.com

☎️ +91 7977724822

HACKATHON PROFILE

AI & Machine Learning diploma student with a strong foundation in logical problem-solving, rapid prototyping, and collaborative development. Specialized in bridging the gap between abstract AI concepts and production-ready full-stack applications. Proven ability to architect scalable solutions within strict time constraints, focusing on high-performance backends and premium user interfaces.

KEY PROJECTS

Jarvis AI Engine

GITHUB OPEN-SOURCE (SOON)

High-Performance AI | Optimization | Data Engineering

Developed a high-throughput AI engine focusing on massive token generation and parameter handling efficiency.

- Engineered a custom optimization technique achieving **~3 Million tokens in 10-15 minutes**.
- Optimized for approx **1 Million parameters**, ensuring stable and rapid inference.
- Collaborated on proprietary throughput architecture designed for scalable AI deployment.

AI Content PRO Platform (Full-Stack)

Spring Boot | Next.js | JWT | Industrial CSS

Architected and developed a comprehensive AI-driven content generation suite.

- Implemented secure **JWT authentication** and CORS handling for cross-origin platform safety.
- Engineered a high-specificity **Industrial Dark Theme** with perfect contrast and performance-optimized rendering.

- Developed backend services for trends analysis, localized reporting, and automated workflow management.
- Established robust ****Integration Testing**** using RestAssured and JUnit for system health monitoring.

InfiniCode Ecosystem

Full-Stack | Backend Optimization | System Architecture

Engineered and maintained a full-stack platform focusing on backend stability and environment scalability. Resolved critical compilation bottlenecks and optimized repository workflows for seamless collaborative development.

Console-Based Checkers Engine (C)

C | Algorithm Design | Data Structures

Architected a fully functional two-player engine using modular programming. Implemented real-time board state tracking, legal move validation, and optimized control flow for near-instantaneous win-condition detection.

EDUCATION

Diploma in Artificial Intelligence & Machine Learning

S.H. Jondhale Polytechnic, Dombivli | 2024 - Present

Current: 2nd Year | Aggregate: 72%

Key Focus: AI Concepts, Logical Efficiency, Structured Programming, Machine Learning Fundamentals.

CORE SKILLS

Programming

Java JavaScript (ES6+) Python C Language HTML5 / CSS3

Frameworks & Tools

Spring Boot Next.js / React Node.js Tailwind CSS Git & GitHub Figma

AI & Backend

JWT Auth RESTful APIs ML Concepts Algorithmic Thinking Integration Testing

GROWTH & GOALS

- Advanced UI/UX Design (Figma)
- Cloud Deployment (Vercel/Heroku)
- Scalable Microservices
- Advanced Neural Networks

HACKATHON STRENGTHS

- Rapid Problem Analysis
- Presentation-Ready Demos
- Adaptability to New APIs
- Collaborative Leadership
